OFFICE OF THE SURGEON-GENERAL WITH THE
GOVERNMENT OF MADRAS,
Ootacamund, the 17th September 1920.

No. 63-T. 496.

From

THE HON'BLE MAJOR-GENL. G. G. GIFFARD, C.S.I., K.H.S., I.M.S.,
SURGEON-GENERAL WITH THE GOVERNMENT OF MADRAS,

To

THE SECRETARY TO GOVERNMENT,
LOCAL AND MUNICIPAL DEPARTMENT,
MEDICAL SECTION.

SIR,

I have the honour to submit the following triennial report on the working of the Civil Hospitals and Dispensaries under the Government of Madras during the years 1917, 1918 and 1919.

Number of Institutions—Statement A.—The present triennium opened with 709 medical institutions available for the public on 31st December 1916, and closed with 730 institutions on 31st December 1919. There were thus 21 medical institutions more at the end than at the beginning of the triennium. At the close of the years 1917 and 1918, the number of institutions were 707 and 721, respectively, against 730 at the end of the year 1919.

2. Of the above, the number of general institutions at the end of the year 1919 were 690 against 668 at the end of the year 1916 (an increase of 22), while the institutions rendering medical aid for women and children only were 40, being one less than at the end of the year 1916. These figures, taking the total population of the Presidency at about 44 millions, give roughly one hospital for every 60,000 of the general population.

3. Deducting the State special (55) and Railway institutions (47) which afford medical relief to a selected class, there were only 588 general institutions open to the general public. This is a wholly inadequate provision for the wants of the population of the Presidency and as long as this state of affairs continues, the demand for the services of unqualified vaidyans and hakims must continue.

4. The provision of only 40 medical institutions for women and children, who number more than half the population of this Presidency, is also quite inadequate. It is hoped that the District and Taluk Boards, with the increased powers of taxation that will be given to them by the new Local Boards Act, will open more dispensaries for women and children and otherwise render relief to the thousands of women who at present prefer to suffer untreated rather than be treated in hospitals open to both sexes.

5. *State Public Institutions.*—These numbered only 17 at the beginning of the year 1917. As a result of the Government's decision to take over the management of the district headquarter hospitals, the hospital at Bellary was taken over during 1917, the hospitals at Berhampur, Vizagapatam, Cocanada, Masulipatam, Guntūr, Anantapur, Cuddapah, Vellore, Chittoor, Chingleput, Cuddalore, Coimbatore, Tanjore, Madura and Rāmnād during 1918 and those at Kurnool and Mangalore during 1919. The Royapetta Hospital hitherto maintained by the Corporation of Madras was also taken over by the Government during 1919. The State Public Hospitals have thus increased from 17 at the end of 1916 to 36 at

the end of 1919. The new Government Rayapuram Hospital which has replaced the ancient Native Infirmary at Rayapuram was opened during 1917. This hospital which meets a long-felt want is rapidly becoming popular and serves as an efficient clinical hospital for the students of the Rayapuram Medical School. Besides improvements to the existing buildings, a new out-patient department and an additional block for 104 in-patients is also under construction at the above hospital as well as considerable accommodation for nurses and nurse pupils.

6. The Elliot School of Ophthalmology at the Government Ophthalmic Hospital was formally opened in March 1920 by His Excellency the Governor of Madras. Two new blocks of quarters for European and for Indian nurses were opened during 1919 at the Government Maternity Hospital to accommodate 6 European and 20 Indian nurses, respectively. A clinical laboratory and two operation rooms, on up-to-date lines, are under construction at the General Hospital. The General Hospital has long been declared to be out of date, unfit, and insufficient to form the General Hospital of the Madras Presidency especially in its accommodation for the clinical instruction of medical students. A large and spacious hospital with up-to-date appliances in all special departments is to be built on the Spur Tank site where also a new Medical College is also to be located. The site has been acquired and plans and estimates for the buildings, etc., have been approved by the Government of India. Detailed plans and estimates are under preparation in the Consulting Architect's office.

7. The question of improving all the headquarter hospitals and of providing quarters for the District Medical and Sanitary Officers and for their assistants is under consideration. Plans and estimates are being prepared. Many of the district headquarter hospitals recently taken over from local municipalities are far from being up-to-date either in buildings, in surgical and medical appliances, in bedding and clothing or in establishments. A nursing staff is completely absent in the majority of these institutions. Now that Government has taken over the majority of these institutions every effort is being made to improve them. In the matter of nursing staff there are at present almost insuperable difficulties. Indian women, although very willing to undertake a course of training in Midwifery (which lasts only one year), have so far shown no inclination to undertake a complete course of nursing for a fully-trained nurse's diploma such as that obtained at the General Hospital by the European and Anglo-Indian women. A small beginning is about to be made to provide fully-trained Indian women both at the General Hospital, at the Gosha Hospital and at the Lady Willingdon Hospital in Sudder Garden, but some years must pass before the results are visible. Another great difficulty is that the General Hospital itself, which is the training ground of Europeans and Anglo-Indians of this country, is unable, even with the considerable increase of pay and allowances which was sanctioned by G.O. Mis. No. 369 (Medl.), dated 12th July 1920, to train and retain enough women for its own requirements. A certain number of nurses are shown on the staff of the Government mufassal headquarter hospitals, but some of these are Roman Catholic nuns who are not trained nurses. A few are French women who are trained nurses, but the majority are women who are only midwives and who have no further training than that given (one year's course) at the Government Maternity Hospital, Madras. The Surgeon-General has under contemplation a scheme which will provide the Presidency with more fully-trained nurses, but many years must pass before the effect of any such scheme will be apparent.

8. *Local Fund and Private Aided Institutions.*—These form the bulk of the medical institutions open to the public. There were 535 institutions at the end of 1916, 510 for males and 25 for females, 537 at the end of 1917, 512 for males and 25 for females, 542 at the end of 1918, 516 for males and 26 for females (a women and children's dispensary at Dhārāpuram having been opened), while at the end of 1919 these were 542 with 519 for males and 23 for females.

9. Eighteen institutions, as stated above, which form the headquarter hospitals of districts, were taken over by Government during the triennium. During the triennium two women and children's dispensaries were opened, both in the Coimbatore district, at Pollachi (1917) and at Dhārāpuram (1918). The women

and children's dispensary at Bellary was amalgamated with the Government headquarter hospital during 1917, while the women and children's dispensary at Adōni, was temporarily closed for want of a lady doctor. The women and children's hospital at Coimbatore was transferred from class B to class A, while the women and children's hospital at Mangalore was transferred from class III to class I during 1919.

10. *New Buildings.*—New hospital buildings based on type-designs were completed at Guntūr and Salem before the hospitals were taken over by the Government. The buildings of many Local Fund hospitals and dispensaries and of several municipal hospitals are still of old types quite unsuited for present-day work. It is time that these buildings were scrapped and that new buildings took their places.

11. *Emergency or Casualty wards.*—The Government desire that all dispensaries in the Presidency should have attached to them a ward, where patients requiring immediate admission to an hospital may be kept till fit to be discharged or to be transferred to the nearest hospital. A number of such small casualty wards were constructed this year, viz., at Maddikera, Pattikonda and Koilkuntla in the Kurnool district, at Arkonam, Polur and Tiruvattur in the North Arcot district, at Mēlūr, Nilakkōttai and Tirumangalam in Madura district, at Aruppukōttai in Rāmnād district, while at Manjeshwar in South Kanara district the ward is a gift of a local zamindar.

12. *Equipment.*—The equipment of most local fund and several municipal institutions is, in many respects, far from satisfactory. Surgical instruments and appliances are of obsolete type and are insufficient. A sterilizer, an essential adjunct of aseptic surgery and one that is needed for every day use, is still absent from many institutions. Microscopes are also not provided in most mufassal hospitals and dispensaries although all medical men and women, whether graduates or licensed medical practitioners, have to be taught the use of the microscope and although it is almost impossible to make a correct diagnosis in many forms of tropical disease in the absence of a microscope.

13. *Quarters.*—There are still several stations where the quarters to which they are entitled are not provided for sub-assistant surgeons. Compensation allowance in lieu of free-quarters is often insufficient and forms only a part of the actual rent which sub-assistant surgeons find themselves obliged to pay for suitable quarters which must be close to the hospital or dispensary.

14. *Institutions closed.*—The demand for sub-assistant surgeons made by the Army medical authorities on account of the great war caused a considerable diminution in the numbers serving in civil employ. Several dispensaries maintained by local bodies had to be closed. The vacancies created were, as far as possible, filled by the temporary employment of men who had retired or who had just passed out of the Medical schools. Long leave was very sparingly given to medical subordinates who, understanding the difficult situation, did not press for such leave, except when circumstances absolutely compelled them to do so. By these means the actual number of institutions closed was small, and for short periods.

15. *State Special Hospitals.*—These numbered 55 at the close of 1916. Two Police hospitals were closed, one in 1917, at Madura, and one in 1918, at Vizianagram. The number at present open is thus reduced from 43 to 41. One canal dispensary was closed during 1918, at Siddapuram, and the Kalinga Ghaut Road Works dispensary was also closed, while three new ones were opened, i.e., the Government House dispensary (Madras), the Coimbatore Forest and Agricultural dispensary (Coimbatore), and the Stonehouse Hill dispensary, Ootacamund, during 1918. Nine famine dispensaries were opened during 1919 in the Ganjām district, whilst famine-relief work was being carried on. Two new dispensaries were also opened in the Gōdāvari district during 1919, at Dummagudem and Venkatapur. The number of State Special hospitals were 53, 53 and 55 at the end of 1917, 1918 and 1919, respectively. There were 41 Police hospitals, one for Forest and Surveys, three for canals and ten for others at close of 1919. The staff of the State Special hospitals treated 10,959 in-patients with 39 deaths,

and performed 611 operations with no deaths; they also treated 53,855 out-patients with 792 operations during 1917; during 1918, 11,414 in-patients with 64 deaths, 579 operations with 9 deaths, 57,157 out-patients with 635 operations; while in 1919 the number of in-patients were 9,838 with 60 deaths and 536 operations with 1 death, 67,402 out-patients with 658 operations (vide statements Di and Dii). In dealing with the statistics such as those mentioned above it is well to remember that the proportion of in- and out- patients and the number of deaths recorded give a very fallacious and in fact a totally untrustworthy view of the effectiveness of the work in a hospital, because it is obvious that a medical officer in charge of a hospital can, and in some cases I am afraid does, keep quite a sharp eye on the mere statistics of the institution. Any one may understand that an unscrupulous medical officer could produce statistics of in-patient admissions and deaths which would be entirely fallacious by the simple process of admitting as in-patients persons who suffer from slight complaints and by discharging before death in-patients who seem likely to die. Both these actions would render the hospital popular. There are always a large number of more or less starving and beggarly people who wish to be admitted as in-patient and it is the universal desire of the friends and relations of the dying patients that death should not take place in the hospital but if possible at home.

The number of police in-patients treated was considerably less during 1919 due to non-prevalence of the influenza epidemic. The Police hospitals had 549 beds for males and none for females during 1917, 488 beds for males and 8 for females during 1918, and 506 beds for males and 2 for females during 1919. The number of beds for females has been reduced as the hospital at Kallichedu in Nellore, where 6 beds were set apart for the wives of policemen, was transferred from class II to class III.

16. *Railway Institutions.*—The number of these working at the end of 1919 was 47, being one less than that at the end of 1916, the dispensary at Tadepalli in Guntūr having been closed during 1918. While 19 beds were available for in-patients during 1916, 17 in 1917, 16 in 1918, only seven are said to be available during 1919. The cause of the decrease has not been explained by the railway authorities. The several railway hospitals and dispensaries treated 86 in-patients with 2 deaths and 188,902 out-patients with 3,964 operations during 1917, 84 in-patients with 3 deaths and 214,431 out-patients with 4,020 operations during 1918, while the number treated during 1919 was 111 in-patients with no deaths and 208,183 out-patients with 3,703 operations (vide statements Di and Dii). The large increase in the number of out-patients treated during 1918 was due to the wide prevalence of an influenza epidemic during that year.

17. *Private Non-Aided Institutions.*—There were 54 of these working at the end of 1916, 40 for males and females and 14 for females only. During 1917 two (class A) institutions were opened, one at Pandalur and one at Glenrock, while those at Yellamanchili and Kortalam were closed and the one at Tiruppattūr was transferred to class IV. During the same year while two institutions were opened for females at Sompet and Tenali, two were closed at Chicacole and Rajahmundry. The institutions open for males were still further reduced during 1918 from 39 to 32 those at Chinnamanur, Wentworth Estate, Mayfield Group Estate, Pandalur, Glenrock, Vaniakulam having been closed and the Manamadura Leper Asylum having been transferred from class V to class IV. The women and children's hospitals were increased by one by opening the Mission Hospital at Erode. However, during 1919, four new institutions belonging to class A were opened, i.e., Chittavalasa, Mannārgudi, Seaforth and Glenrock, while the Sri Rama Vilas dispensary at Vizagapatam was closed. So at the end of 1919 there were 35 institutions for males and 15 for females. The financial difficulties and insufficiency of qualified doctors resulting from the war must have had a serious effect on the working of these institutions. The several institutions treated during 1917, 396,549 (15,748 in-patients and 380,801 out-patients) out of which 208,208 were women and children. The total mortality was 686 and 19,149 operations were performed with 25 deaths. During 1918, the total treated was 347,860 (15,922 in-patients and 331,938 out-patients) with 1,029 deaths. There was a fall of 19,863

in the number of males treated as compared with the figure of the previous year while the women and children treated were 28,826 less. The number of operations performed was 17,218 with 37 deaths. In 1919, the total treated is 377,369 (15,985 in-patients and 361,384 out-patients) with a total mortality of 810. There has been a *marked increase* in the total number of patients *treated during* 1919, especially those treated as out-patients, being 29,446 more than in 1918. Of the total number, the women and children treated during 1919 were 188,531, being 9,149 more than in 1918. The number of operations performed was 16,894 with 32 deaths. There has been a gradual decrease in the number of operations recorded during the triennium.

18. For in-patient treatment the number of beds available in 1917 was 315 for males and 710 for females. During 1918 while the number of beds for men was reduced to 295, the number for females was increased to 746. During 1919 the number of beds was increased to 333 for males and 782 for females.

19. *Medical Education.*—It is now an acknowledged fact that increased medical aid in the rural areas can be made available only by turning out more medical men and women of the third class (Sub-Assistant Surgeons). In addition to the three medical schools at Madras (Rayapuram), Tanjore and Vizagapatam, a medical school was opened in 1917 at Calicut and a continuation medical school in Madura in 1918 for third and fourth year students. Improvements were also made at the first three places in order to admit a larger number of students. Proposals are under consideration for opening additional schools. As large a number of applicants seeking admission to the Madras Medical College are yearly refused admission as are admitted. Another medical college in the Madras Presidency is urgently required. It has therefore been proposed to construct a larger college near the proposed new General Hospital at the Spur Tank site. Further to avoid overcrowding in a single institution (the only one of its kind in the Presidency), Government contemplate the opening of a second medical college at Vizagapatam.

20. *House Surgeons and House Physicians.*—During the greater part of the last three years the exigencies of war did not permit of the required number of men being appointed to these house-appointments. It is hoped, as the calls for Military Service are now considerably fewer, that candidates will, in the near future, be available to fill these appointments. It is hoped also that Government will sanction additional appointments at all headquarter hospitals and at Civil Surgeon's stations, so that every medical graduate who passes out of the Medical College may benefit by additional practical experience before he begins life as a medical man either in Government service or as private practitioner.

21. *Treatment in hospital of the well-to-do patients.*—The charging of fees to well-to-do patients attending State hospitals was first started in Madras. The municipal institutions at the headquarters of each district also levy similar fees. Different scales of charges were made in several municipal hospitals. The Government have, however, now issued orders to the effect that the State hospitals in Madras City should from 1921 afford relief only to Government servants, and to the poor and comparatively poor and that special wards for well-to-do patients will not in future be provided by the State.

22. *Itinerating dispensaries.*—For want of medical subordinates the itinerating dispensaries at Kavati, Chodavaram, Dhone and Chittoor were closed during 1918. During 1919 the dispensary at Dhone was re-opened. This dispensary together with the boat dispensary on the canal in the Nellore district and the dispensary at Krishnadevipet, Gōdāvari district, were working during 1919. Itinerating dispensaries have not, as far as can be seen, been popular either with the medical officers or with the people. They are not sufficiently well organized nor was sufficient money spent upon them to make them a success. Very little good can be done by a single medical officer moving over a long itinerary throughout the districts. The equipment provided by the local bodies was scanty and imperfect and our experience has shown that an itinerating dispensary to be successful should form part of a definite scheme under close supervision by a

controlling officer or several controlling officers and unless it is taken up on a large scale such as is being done in other Provinces very little good can be done.

23. *Cholera Parties.*—Three permanent and five temporary cholera parties were at work in the Presidency. It is very difficult to ascertain what the effect has been of a cholera party working in a district. The Assistant Surgeons in charge of cholera parties report that they receive very little intelligent help from the people. It often happens that their presence is resented rather than welcomed. The vast majority of the villagers do not believe that cholera is due to germs which can be destroyed and therefore their co-operation cannot in many cases be secured. There seems also need for a revision of the methods employed by cholera parties. At present the efforts of the individuals are too scattered. The news of the outbreak takes too long to arrive and a systematic study of the location of the foci of infection throughout the Presidency has not as yet been made. This important subject is at present under close scrutiny with a view to better results.

24. *Extension of medical relief to rural areas by duplication of medical staff of certain institutions.*—This proposal of the Government has not yet been well responded to by the local bodies as many bodies are not able to bear the additional expenditure involved and on account of the dearth of medical subordinates.

25. *Special training—Ophthalmic training.*—To afford facilities for the performance of eye work in mufassil hospitals, Civil Assistant Surgeons specially trained at the Government Ophthalmic Hospital in Madras have been posted to the headquarter hospitals at Vizagapatam, Tanjore and Madura. Civil Assistant Surgeons are now being regularly trained at the Government Ophthalmic Hospital and, after training, will be posted to mufassal hospitals. It is hoped thus to minimize the terrible loss of sight which results for the operative interference on the eyes of the ignorant peasantry by equally ignorant hakims and vaidhyans. *Dentistry.*—The lack of dental specialists is very much felt in the mufassal. Diseases of the teeth are wide spread both in the adult and amongst children. Government have therefore sanctioned a special course in dentistry for Government medical men. Applications were called for from men willing to be trained in dentistry. As a beginning four men from the mufassal have been posted for training from 1st May 1920. The question of instituting a dental diploma and a degree is under consideration and of founding a dental college. *Plague Inoculation.*—A certain number of Civil Assistant Surgeons and Sub-Assistant Surgeons from each district are sent each month for training in the methods of plague inoculation to the King Institute, Guindy. *X-Ray Training.*—The question of instituting a special course in X-ray work for medical officers is under consideration.

26. *Female Medical Aid and Education.*—The demand for qualified medical women is increasing daily, but the number of women practitioners in the Madras Presidency is quite insufficient to meet the demand. The Government are doing their best to increase the number of women medical practitioners by the grant of special scholarships both to suitable women students in the preliminary arts course and in the medical course. The Government proposed to start a provincial women's medical service and invited women medical practitioners to join the service, but the response, however, has not been encouraging. Government's proposals to start a separate women's medical school staffed entirely by women teachers and ultimately converting it into a medical college is gradually taking shape. The site for the buildings has been acquired and plans and estimates have been submitted to the Government. The mission authorities at Vellore have, with considerable assistance from Government funds, started a medical school for women of the Licensed Medical Practitioner class.

27. *Nurses.*—It has been long recognized that efficiently trained nurses are a valuable adjunct in medical relief. Their want is keenly felt not only in Madras, but also in the mufassal hospitals. All the headquarter hospitals should in time be staffed by trained nurses. Proposals are under consideration for the formation of a mufassal nursing service, but great and real difficulties have to be overcome.

28. *Midwives.*—The erroneous idea still persists among the people of South India that a woman in labour can be assisted by any other woman who professes to

know something about child-birth. This partly accounts for the large mortality among infants both in Madras city and the mufassal. This state of affairs can be remedied only by educating the people and by providing a sufficient number of trained midwives. As the practice of training barber midwives in modern methods has not proved satisfactory, the Government have ordered that the scheme should be dropped. A very large number of deaths occur among women as the result of the unskilled and septic practices of barber midwives during normal labour.

29. *Health Visitors.*—According to the scheme sanctioned by the Government to combat the high infant mortality common in all big cities, four midwives were appointed by the Corporation from 15th September 1917, for work in the first district of Madras, which is the most overcrowded portion of the city and is populated by the poorest classes. Their work had to be properly regulated and checked and so a medical Lady Superintendent was appointed in December 1917. On the recommendations of the Lady Superintendent, a centre was opened at Triplicane with the threefold object of regulating the work of the midwives, providing medical aid to infants in their houses and ascertaining, as far as possible, the common causes detrimental to the life of the infant in Madras. The monthly progress of the infants is also observed at this centre. The number of midwives was also increased to eight. The midwives conducted 681 cases for the year ending September 1918. Of these 43 babies died within 10 days, 73 died within a year, 427 are living while 44 are not traced. As it was observed that the existence of more centres like the one at Triplicane was essential to the successful working of the scheme, two more centres were opened during the year. The one at Washermanpet was opened on 26th May 1919 and was put in charge of a Lady Health Visitor trained at Delhi Health School with two midwives to assist her. The number of midwives was later on increased to four. The other centre at Purasawalkam was opened on 10th October 1919, and is placed under a Lady Sub-Assistant Surgeon. The total number of midwives working under the scheme has been raised from 8 to 11. The number of labour cases conducted has increased from 681 in 1918 to 906 in 1919. These midwives, besides visiting during their puerperium the women whose labour they conducted, are also attending to the puerperium of other women when their services are requisitioned. The Corporation has considerably increased the pay and prospects of these midwives.

30. It is necessary to obtain the services of a larger number of trained Health Visitors, but such visitors are not available. The Delhi Health School entails such conditions of admission and courses of study that only women with a high standard of English education can obtain admission or hope to secure a pass. Hence it has been decided to train the Health Visitors locally. The classes commenced in January 1919 and three of the senior midwives are undergoing training.

31. A "creche" and maternity home is much needed for each quarter of the town, but limited finances is the bar to their establishment. The Corporation has undertaken to supply, free of charge, to children and in some cases to mothers also, good milk. This will certainly add to the vitality and chances of survival of children. There were 100 children receiving such a supply of milk during the year 1919.

32. *Health Lectures.*—Two assistant surgeons were deputed to deliver lectures in the Kistna and Cuddapah districts and in the Tanjore and Tinnevelly districts during 1917. During 1918 one Assistant Surgeon lectured in Chingleput and Trichinopoly districts, one in South Kanara, one in Madura, while a Muhammadan Civil Assistant Surgeon was deputed for the work in Negapatam, Vellore, Vaniyambadi, Adoni and other Muhammadan centres. In Madras city lectures were delivered by officers of the Indian Medical Service and also by private medical practitioners. The lectures were delivered with the aid of lantern demonstrations and aroused considerable public interest. Owing to the dearth of medical men the lectures could not be continued in 1919. The Health and Welfare Association has now taken over the task of diffusing the sanitary knowledge among the masses and lectures are being arranged for all over the Presidency.

33. *Medical Inspection of Schools.*—The need of inspecting the school-going population has been recognized long ago. Many of the defects from which he suffers the school boy is unable to recognize and inasmuch as he is to be the citizen of tomorrow, it is most desirably necessary that defects be recognized early and remedied so that he may grow up to render full service to the State. In accordance with the wishes of the Government in G.O. No. 1454, Home (Education), dated 14th November 1918, details regarding the medical inspection of schools are under discussion. Applications have been received from numerous medical men willing to be inspectors. Questions of remuneration are under discussion. It must, however, be stated that to secure uniformity of results it is necessary that there should be a school-inspecting service, but during the present dearth of medical men and women such a service cannot be established.

34. *Patients treated—Statement B.*—The total number of patients treated in the State Public, Local Fund and Private-aided dispensaries was in 1919, 7,543,567; in 1918, 7,543,205 and in 1917, 7,623,616. There was a fall in the total number treated during 1918 when compared with the number treated. The figures for 1919 were almost the same as those for 1918. The number of beds available for in-patient treatment was in 1917, 3,642 for men and 2,948 for women and children; during 1918 it was 3,784 for men and 3,012 for women and children, an increase of 142 beds for men and 64 for women and children; while in 1919 there were 3,930 beds for men and 3,070 for women, an increase of 146 beds for men and of 58 beds for women and children. In Madras the beds for women and children were 879, while for men they were 822. There has been a steady increase in the number of in-patients treated during the triennium, being 124,051 during 1919, 115,154 during 1918 and 107,370 during 1917. Of these the totals treated in the women and children's hospitals were 18,486, 15,784 and 17,382 for the years 1917, 1918 and 1919, respectively. The death-rate, which was 4·30 per cent in 1917, rose to 5·90 per cent during 1918, due to the prevalence of influenza, while for the year 1919 it was 5·66 per cent, being 1·55 per cent higher than for the year 1916. Among the in-patients treated 63·44 per cent were returned as cured in 1917, 61·63 in 1918 and 61·63 in 1919. The daily average number of in-patients treated was 4,374·87 in 1917, 4,794·64 in 1918 and 5,177·91 in 1919. The number of out-patients treated was 7,516,246 in 1917, 7,428,051 during 1918, while in 1919 it was 7,419,516. There has been a steady decrease in the out-patients treated, due to the closure of certain dispensaries in the mufassal for want of subordinates. The daily average number of out-patients treated was 46,428·80 in 1917, 44,525·12 in 1918 and 46,540·81 for 1919. The number of those "represented by friends" has been fluctuating during the present triennium, being 355,642 in 1917, 368,999 in 1918 and 362,491 in 1919. Of the total number treated, Hindus formed 73·94 per cent in 1917, against 74·90 per cent in 1918 and 74·95 per cent in 1919, while the corresponding figures for Mussalmans were, respectively, 12·82 per cent, 12·65 per cent and 12·33 per cent, for Europeans and Anglo-Indians, 0·93 per cent, 0·97 per cent and 0·91 per cent, while the figures for all others were 12·31 per cent, 12·28 per cent and 11·81 per cent. According to the census of 1911 the distribution of population by communities was 80·19 per cent Hindus, 11·40 per cent Mussalmans, 2·80 per cent Europeans and Anglo-Indians and 5·61 per cent all others.

35. *Diseases treated—Statements C1, C2, D1, D2* and *E.*—The commonest diseases treated vary but little from year to year. The "other diseases of the skin" form always the largest number, being 1,301,997 in 1917, 1,349,348 during 1918 and 1,277,894 in 1919. These are considerably less than in the previous triennium. "All other diseases of the digestive system" come next in frequency, being 1,195,639 in 1917, 1,146,053 in 1918 and 1,182,241 in 1919. Eye diseases come next, the admissions for which number 503,274 in 1917, 428,676 in 1918 and 506,755 in 1919. Next in order come malaria, injuries, diseases of the generative system and venereal diseases (syphilis and gonorrhœa). It must be stated here that the number of patients treated in any institution is not necessarily an index of the ability of the medical man in charge.

36. *Infectious Diseases.*—The unpopularity of hospital treatment shown by patients suffering from infectious diseases continues as before. The Corporation of Madras has largely improved the Infectious Diseases Hospital, Rayapuram, and Isolation Hospital, Krishnampet. These institutions rendered great service during the influenza epidemic of 1918. Arrangements are also being made at all headquarter hospitals to locate infectious diseases wards within the compound, and not as at present in a distant corner without the boundaries, of the town.

37. *Malaria.*—The number of patients treated for malaria is still high. During 1917, the number treated was 538,412, during 1918 it was 456,574, while in 1919 the number went down to 428,179.

38. *Tuberculosis.*—There is no doubt that this dire disease is increasing in all larger towns. Insanitary and overcrowded dwellings with bad ventilation coupled with want of sufficient nourishment, low wages, and high prices, must tend to increase the number of victims to this disease. The number treated in the hospitals is in my opinion no guide to the extent to which the disease is prevailing. Because there is very good reason to believe that in Madras City alone ten thousand persons suffering from tuberculosis exist at the present day. The number treated for tubercle of the lungs during 1917 was 13,929, in 1918 it was 12,560, while in 1919 it was 14,212.

39. *Leprosy.*—The number of admissions for leprosy was 9,124 in 1917, 8,905 in 1918 and 9,925 in 1919. It is true that this number is only a fraction of the people who actually suffer from this terrible disease. Introduction of the Leprosy Act cannot be recommended until sufficient accommodation has been provided; steps are being taken towards this end. The Leper Asylum in Madras, which was in a crowded locality, has been removed to the Fiji Emigration depot.

40. *Cholera.*—During 1917, the number of cholera cases treated was 8,247, in 1918 it was 16,384, while in 1919 it was 12,976. The number of cholera cases recorded in the whole Presidency was, however, 58,939 in 1917, 122,263 in 1918, and 93,262 in 1919.

41. *Venereal diseases.*—The number of admissions for gonorrhœa and syphilis was 109,640 in 1917, 103,430 during 1918 and 117,046 during 1919. Though these figures show a fall over those of the last triennium, they are in no sense a guide regarding the prevalence of the diseases. Urgent steps are necessary to prevent the spread of these diseases, which have a tremendous hold on the people and which are the cause of much illness and many deaths, and especially illness and deaths amongst little children. Experience of the Government Ophthalmic Hospital also proves that an enormous amount of blindness and other forms of eye diseases amounting to from 50 per cent to 70 per cent of all cases treated are due to venereal diseases.

41-A. *Plague.*—There were 1,310 patients treated for plague during 1917, 1,145 during 1918 and 798 in 1919.

42. *Smallpox.*—The number of cases admitted during 1917 numbered 1,335 against 2,745 in 1918 and 3,441 during 1919. Of the total number treated, protection by vaccination or otherwise was noted in 1,222 cases. Among these 969 cases were vaccinated, 39 were re-vaccinated while three had previous attacks of smallpox and 211 cases were unprotected. From among the 1,011 protected cases there were 137 cases of death, i.e., 13·55 per cent. While out of the 211 unprotected there were 47 deaths, i.e., 22·27 per cent.

43. *Labour cases.*—During the year 1917, 42,486 normal and 5,118 abnormal labour cases were conducted by the staff of medical institutions against 41,042 normal and 4,630 abnormal during 1918 and 42,750 normal and 4,695 abnormal during 1919. Though it is encouraging to see that the normal cases conducted have increased, still when this number is compared with the total number of births in the Presidency, the sad fact is brought out too plainly that the day when the layman will recognize the benefits of skilled assistance during labour is still very far off.

44. *Hookworm disease or Ankylostomiasis.*—The ravages of this disease have not in the past been sufficiently recognized and efforts are being made to recognize and treat the disease. It affects all classes. Research work regarding the

prevalence of this disease is being conducted by Dr. K. S. Mhaskar, M.D. As desired in G.O. Mis. No. 403, Medical, dated 8th August 1919, investigations are now being carried on at the headquarter hospitals of the following districts: Madura, Tanjore, the Nilgiris, Malabar, Kistna and Vizagapatam. There seems no doubt that the disease is enormously prevalent throughout Southern India and experiments and research have proved that from 75 to 93 per cent of the total population are affected. This disease produces a considerable mortality; it also produces a much more widespread physical inefficiency. The problem of how to deal with the very extensive, common and widespread general disease affecting such a very large proportion of the population is one which calls for solution; it is also a problem of extraordinary difficulty.

45. *Operations—Statement G.C. & C.* 2.—The number of operations performed during the year 1919 on 293,610, patients was 297,933, about 11,000 less than the number recorded in the previous year. The total number of operations performed during 1917 and 1918 were 304,773 and 308,932, respectively. The large fall in the number of operations recorded in 1919 is due to the following kinds of operations having been left out of the G statement—vide G.O. No. 506, dated 5th November 1919, viz., passing of catheters and introduction of seton, hypodermic injection, removal of wax from the ear, and cupping. The number of operations for "removal of wax and foreign bodies from the ear," which were 21,915 in 1917 and 23,395 in 1918, went down to 9,894 during 1919. The number of hypodermic injections given every year were on an average about 6,000. So, if these operations were also included in the statement of 1919, the number for 1919 would have been at least 16,000 more than in 1917 or 1918. The in-patient operations which need greater skill and better nursing were in 1917, 39,721 with 524 deaths; in 1918, 37,402 with 737 deaths; while in 1919, they were 34,561 with 792 deaths. The decrease in the number of in-patient operations recorded is mostly due to the omission of such operations as "hypodermic injection," "passing of catheters," and "cupping," which were to a large extent performed on people treated as in-patients. It may also be due to the number of private practitioners having increased in Madras and all large towns. The method of gauging the surgical work done in the Presidency by recording the number of operations performed, the number of patients who die, etc., has always been fraught with difficulty and many fallacies creep into any form of statistical record of surgery. Orders have been issued to all the operating surgeons in the Presidency asking them to make a note in their operation-register against each operation which they perform, stating whether, in their own opinion, the operation just performed and recorded should or should not be considered to be a major operation. The effect of this order will not be seen until the end of the next triennium. It is hoped however that by thus placing the onus of deciding on the spot and at once the question as to whether any individual operation is a major or a minor one will lead in time to the collection of reliable statistics. During 1916, only 203 cases of cholera were treated as in-patients with 90 deaths; during 1917, 511 cases were treated with 271 deaths, and in 1918, 1,310 with 572 deaths, while in 1919, 1,362 cases were treated with 717 deaths. It must be noted that late Roger's method of treatment by giving intravenous injections of hypertomic saline solution, has been largely employed in the treatment of cholera cases and was recorded as an operation.

46. The percentage of mortality in in-patient operations has increased:—1·32 per cent in 1917, 1·97 per cent in 1918 and 2·29 per cent in 1919. This is due to the inclusion of intravenous injections for cholera under the head of operations. The death-rate calculated on the total number of operations (both in-patients and out-patients) was 0·21 per cent in 1917, 0·27 per cent in 1918 and 0·28 per cent in 1919. The percentage of cures during the triennium was 96·12 per cent for 1917, 95·95 per cent for 1918 and 97·11 per cent for 1919.

47. (1) *Lieut.-Col. W. J. Niblock, I.M.S.*, First Surgeon, General Hospital, Madras, performed 339 operations, of which 8 were abdominal sections; 11 operations on skull, brain and spinal cord; 14 operations on the liver and gall bladder; 99 operations on the intestines including hernia; 81 operations on the testicles and spermatic cord; 7 operations on elephantoid scrotum; 6 operations on the kidney; 41 excision of tumours, while 5 were operations on the female

generative organs. (2) *Dr. S. Rangachary, M.B. & C.M.*, who acted at first as Assistant Superintendent, Maternity Hospital, and then as Second Surgeon, General Hospital, performed a total of 238 operations, of which 105 were of general surgery out of which abdominal sections numbered 4; operations on the intestines including hernia 25; operations on the testicles and spermatic cord 23; while 45 were applications of forceps; 8 cæserean sections and 80 other abdominal sections. (3) *Dr. W. J. Fernandes, L.M.S.*, Third Surgeon, General Hospital, performed a total of 253 of which 8 were operations on the skull, brain and spinal cord; 62 operations on the intestines including hernias; 96 operations on the testicles and spermatic cord; 10 operations on elephantoid scrotum and 9 operations on the liver. (4) *Dr. R. Ganapati Ayyar, L.M.S.*, Civil Assistant Surgeon, Royapettah Hospital, performed a total of 532 operations of which14 were abdominal sections; 18 operations on the liver; 60 for radical cure of hernia; 181 operations on the testicles and spermatic cord; 25 operations on elephantoid scrotum and 21 operations on the tonsils. (5) *Major T. W. Harley, I.M.S.*, District Medical and Sanitary Officer, Madura, performed a total of 232 operations, of which 17 were abdominal sections; 71 were operations on intestines including hernias; 21 operations on testicles, and spermatic cord; while 12 were on female generative organs. (6) *Dr. G. V. James, M.D., C.M.*, Civil Surgeon, Tellicherry, performed a total of 418 operations, of which 52 were abdominal sections; 8 operations on the liver; 73 operations for external hernia; 125 operations on the testicles and spermatic cord; 24 operations on elephantoid scrotum while obstetrical operations numbered 22, operations on the female generative organs 16; and 25 operations for extraction of lens. (7) *Rao Bahadur T. Krishnan*, Civil Assistant Surgeon, Palghat, performed a total of 318 operations, 20 of which were abdominal sections; 51 operations for radical cure of hernia; 46 operations on testis and spermatic cord; 21 amputations of penis; 8 operations on tonsils, while the obstetrical operations were 14, operations on the female generative organs 28, and extraction of lens 55. (8) *Dr. U. Sitaramaswami Naygdu, L.M.S.*, District Medical and Sanitary Officer, Gōdāvari, performed a total of 344 operations of which abdominal sections numbered 8; operations for radical cure of hernia 45; operations on the testis and spermatic cord 133; operations for elephantoid scrotum and penis 26; amputations of penis 10, while extractions of lens were 25.

48. *Special Surgery (Obstetrical and Gynæcological Cases)*—(1) *Major Hingston, I.M.S.* (Superintendent), Government Maternity Hospital, performed a total of 202 operations of which 27 were obstetrical operations and 175 abdominal sections for non-obstetrical purposes. (2) *Dr. Miss F. A. Scott* (Women's Medical Service and Superintendent, Victoria Caste and Gosha Hospital, Madras) performed a total of 215 operations of which obstetric operations numbered 185 and abdominal sections 19. (3) *Dr. Mrs. M. Bradley* (Lady Apothecary, Lady Havelock's Hospital, Cocanada) performed a total of 253 operations of which obstetrical operations numbered 168.

49. *Ophthalmic Surgery.*—(1) *Lieut.-Col. H. Kirkpatrick, I.M.S.*, Superintendent, Government Ophthalmic Hospital, performed a total of 1,700 operations, of which extraction of lens numbered 1,153; excision of lachrymal sac 92; sclerocorneal trephining for glaucoma 116; Iridectomy 139 and 92 excisions of fornix and tarsus for trachoma. (2) *Dr. K. Koman Nayar, L.M.S.*, Civil Assistant Surgeon, Assistant Superintendent, Government Ophthalmic Hospital, Madras, performed a total of 730 operations of which 320 were for extraction of lens; 147 excisions of fornix and tarsus for trachoma, 37 for Iridectomy, 19 sclerocorneal trephining for glaucoma and 61 excisions of eyeball. (3) *Dr. F. Kugelerg*, Rāmnād district, performed a total of 482 operations of which 294 were for extraction of lens, 108 Iredectomy, 72 sclerocorneal trephining for glaucoma, 48 for excision of lachrymal sac. (4) *Dr. H. R. Sadasira Rao*, Civil Assistant Surgeon, Medical School, Vizagapatam, performed a total of 452 operations of which extraction of lens numbered 291, Iredectomy 60, excision of fornix 18, for excision of lachrymal sac 16.

50. *Finance Statements—H. Receipts.*—With the conclusion of war, the financial conditions have not become normal. Government are trying to meet the

increased demands from the Medical Department. Public subscriptions have been fluctuating. The year 1919 opened with a cash balance of Rs. 31,713 as against Rs. 31,386 in 1918 and Rs. 32,234 in 1917. Under receipts Government contributions for 1919 amounted to Rs 18,20,214 while in 1918 it was Rs. 12,12,186 and in 1917 it was Rs. 8,53,230. The Municipal contributions for 1919 were Rs. 6,81,168, for 1918 Rs. 6,66,275 and for 1917 Rs. 6,84,335. The Local Fund bodies contributed during 1919 Rs. 13,95,263, during 1918 Rs. 12,28,865 and in 1917 Rs. 13,96,644. Public subscriptions show a fall during 1919 over those for 1918, being Rs. 1,75,515 for 1919, Rs. 2,31,271 for 1918, and Rs. 1,04,428 for 1917. There has however been a tendency towards an increase during the present triennium as compared with the previous triennium. The total miscellaneous receipts for 1919 amounted to Rs. 1,96,498, for 1918 Rs. 11,50,318 and for 1917 was Rs. 1,36,539. There is also a marked increase in this item during the triennium.

51. *Expenditure.*—The total expenditure for 1919 was Rs. 43,37,980 as compared with Rs. 35,35,619 for 1918 and Rs. 32,25,439 for 1917. The increase was under all the heads of expenditure. The amount spent on salaries during 1919 was Rs. 18,30,980 as against Rs. 15,00,525 for 1918 and Rs. 13,61,692 for 1917. Medicines cost for 1919 Rs. 6,97,536, for 1918 Rs. 5,88.806 and for 1917 Rs. 5,83,649. The increase in the prices of foodstuffs has naturally caused an increase in the amount spent for dieting patients. In 1919 Rs. 6,20,421 were spent for diet, as against Rs. 4,07,421 for 1918 and Rs. 3,66,412 for 1917. Miscellaneous charges were in 1919 Rs. 6,18,511, in 1918 Rs. 5,81,420 and in 1917 Rs. 4,83,532. The cost of buildings and repairs during 1919 was Rs. 5,64,273, during 1918 was Rs. 4,50,744 and in 1917 was Rs. 4,03,392. Investments for 1919 amounted to Rs. 6,241, for 1918 Rs. 6,703 and for 1917 Rs. 26,762. The daily average cost for diet for each patient for 1919 was As. 5-3, for 1918 was As. 3-8 and for 1917 was As. 3-5. Excluding the expenditure on buildings, diet and investment, the cost per patient treated was for 1919 As. 6-8, for 1918 As. 5-8, and for 1917 was As. 5-1. The year 1919 ended with a closing balance of Rs. 17,546 while the balance at the close of 1918 was Rs. 30,975 and at the end of December 1917 it was Rs. 37,534.

52. *Statement J.*—The year 1919 opened with an invested capital of Rs. 13,02,297-2-4 while the years 1918 and 1917 opened with a capital of Rs. 12,18,976 and Rs. 11,86,784-3-7, respectively. The amount invested during 1919 was Rs. 46,991-1-0, during 1918 was Rs. 77,220-4-4 and during 1917 was Rs. 51,728-9-4. The securities sold during 1917 amounted to Rs. 19,500, while none were sold during 1918 and 1919. The closing balances on December 31st of 1919, of 1918 and of 1917 were Rs. 13,49,231-3-10, Rs. 12,96,196-4-4 and Rs. 12,18,987-11-1, respectively.

53. *Medical Libraries.*—The District Lending Medical libraries had 627 members at the close of the year 1917. The members increased to 666 during 1918 and the year 1919 ended with 774 members. The number of books available for circulation at the end of the year 1917 was 4,924, at the end of 1918, 5,315, while at the end of 1919 it rose to 5,698. The number of books circulated during the years 1917, 1918, 1919 were 1,816, 1,626 and 1,560. This gradual fall is disappointing. The total receipts for 1919 were Rs. 15,369-3-2, for 1918 Rs. 13,210-13-4, and for 1917 Rs. 10,755-13-11. The amount spent on the purchase of books during 1919 was Rs. 9,185-8-10, during 1918 Rs. 2,806-10-6 and during 1917 Rs. 2,512-6-0. The expenditure on contingencies and furniture was for 1919 Rs. 386-3-9, for 1918 Rs. 293-1-10 and for 1917 Rs. 94-12-7. The cash balance at the close of the year 1919 amounts to Rs. 5,797-6-7, while at the end of 1918 it was Rs. 10,111-1-0 and at the end of 1917 was Rs. 8,148-11-4.

54. *Junior Sub-Assistant Surgeons in independent charge.*—During 1917, 37 Third-grade and 72 Fourth-grade temporary and permanent Sub-Assistant Surgeons were in independent charge of dispensaries. During 1918, 93 permanent and 63 temporary men held such charges. While in 1919, 107 permanent men under 10 years of service and 62 temporary hands were given independent charges.

This arrangement is necessitated by the demands for war service on the Medical Department.

55. The number of Military Assistant Surgeons in civil employ was 2 in 1917, 2 in 1918, and 5 in 1919. A number of permanent Civil Assistant Surgeons had willingly volunteered for military service. During 1917–18 Civil Assistant Surgeons held temporary commissions in the I.M.S. During 1918, 19 were holding the commission and during 1919, 17 were still in military service. Their conduct and ability has been favourably reported on by their superiors. The number of Civil Sub-Assistant Surgeons doing military duty was 115 in 1917, 120 during 1918 and 95 during 1919.

56. *Inspection of hospitals and dispensaries.*—During the year 1919, the District Headquarters Hospitals at Vizagapatam, Ootacamund, Coimbatore, Calicut, Salem, Chittoor, Vellore, Bellary, Guntūr, Nellore, Cocanada, Trichinopoly, Tanjore and Chingleput and the Civil Surgeons' institutions at Coonoor and Rajahmundry were inspected by me. Besides these I have also inspected 26 other hospitals and dispensaries at Gudalur, Kotagiri, Mettupalaiyam, Tiruppur, Erode, Pollachi, Udamalpet, Madanapalle, Palmanair, Punganur, Hospet, Nandyal, Tenali, Bapatla, Ongole, Ellore, Bezwada, Stuartpuram, Kavali Hospital and Criminal Settlement, Tiruppattur, Vaniyambadi, Nidadavole, Conjeeveram, Poonamallee, Sriperumbudur and Srirangam. District Medical and Sanitary Officers carried out their inspection of hospitals and dispensaries in their respective districts except in 53 institutions. Stock and service books were carefully verified during the inspections at the stations inspected.

I have the honour to be,

Sir,

Your most obedient servant,

G. G. GIFFARD, Major-General, I.M.S.,
Surgn.-Genl. with the Government of Madras.

STATEMENT A

Showing the number of Dispensaries in the British Territory (excluding Anjengo), Madras Presidency, during the year 1919.

Population of the Province—41,399,832 (Census of 1911).

Class of dispensary.	Number open on 31st December 1918.	Number opened during the year 1919.	Number closed during the year 1919.	Number open on the last day of the year 1919.	Remarks.
1	2	3	4	5	6
I. State-public ... A	31	(*a*) 3	...	34	(*a*) * Kurnool (Kurnool), * Royapettah Hospital (Madras), and * Wenlock Hospital, Mangalore (Kanara South) transferred from class III to class I.
I. State-public ... B	1	(*b*) 1	...	2	(*b*) * Women and Children Hospital, Mangalore (Kanara South) transferred from class III to class I.
II. State-special—					
(i) Police ..	41	(*c*) 1	(*d*) 1	41	(*c*) Vizianagram (Vizagapatam).
(ii) Forests and Surveys.	1	...	...	1	(*d*) * Kallichedu (Nellore) transferred from class II to class III.
(iii) Canals ...	3	...	...	3	
(iv) Others ...	8	(*e*) 11	(*f*) 9	10	(*e*) Dammagudam, Venkatapur (Gōdāvari) and nine famine Dispensaries temporarily opened (Ganjām).
					(*f*) Nine famine Dispensaries (Ganjām).
III. Local Fund ... A	491	(*g*) 9	(*h*) 7	493	(*g*) Dharakota (Ganjām), Madgole, Waltair (Vizagapatam), * Kallichedu (Nellore), Itinerating Dispensary, Dhone (Kurnool), Pamidi (Anantapur), Isolation Hospital, Krishnampet (Madras), Payyanur (Malabar), and * Municipal Dispensary, Coimbatore (Coimbatore).
III. Local Fund ... B	22	...	(*i*) 3	19	(*h*) * Kurnool (Kurnool), Itinerating Dispensary, Hospet (Bellary), Itinerating Dispensary (Cuddapah), * Royapettah Hospital (Madras), Thalli, Kavaripatnam (Salem), and * Wenlock Hospital, Mangalore (Kanara South).
					(*i*) Women and Children Dispensary, Adoni (Bellary), Women and Children Hospital, Mangalore (Kanara South) and * Women and Children Hospital, Coimbatore (Coimbatore) transferred from class B to class A.
IV. Private-aided... A	25	(*j*) 1	...	26	(*j*) Mission Dispensary, Kollimalais (Salem).
IV. Private-aided... B	4	...	...	4	
V. Private non-aided. A	32	(*k*) 4	(*l*) 1	35	(*k*) Chittavalasa (Vizagapatam), Mannargudi (Tanjore), Seaforth Dispensary and Glenlock Dispensary (Nilgiris).
V. Private non-aided. B	15	...	...	15	(*l*) Sri Ramavilas Dispensary (Vizagapatam).
VI. Railway	47	...	...	47	
Total ...	721	30	21	730	

CLASSES I AND II.—These include all institutions maintained by Provincial funds and under Government management. The fact that an institution possesses endowments or receives contributions from Local funds or private subscriptions should not be regarded as a reason for not classing it as 'State' so long as Provincial and Imperial funds are practically responsible for all the charges connected with it. Class I.—'Public' are State dispensaries which are open to the poorer classes of the public. Class II are State dispensaries which serve only a special section of the public as indicated in the sub-classification attached.

CLASS III.—Local Fund dispensaries include all institutions which are vested in Local Boards or Municipalities or guaranteed or maintained by Local or Municipal funds. The fact that such an institution is aided by private subscriptions, or receives assistance from Government in the shape of part of the salary of the medical officer, grants of medicine, or otherwise, should not be regarded as a reason for not classing it as a Local Fund dispensary so long as its existence is practically dependent upon Local Funds.

CLASS IV—Comprises institutions supported by private subscriptions or guarantee, but receiving aid from Government or Local Funds.

CLASS V—Comprises institutions maintained entirely at the cost of private individuals or associations. The fact that Government supplies superior inspection or regsiters should not be regarded as a reason for not treating it as a private non-aided dispensary.

CLASS VI—Comprises all railway dispensaries whether maintained by State railways or others.

Class A = General institutions. Class B = Women and Children's institutions.

* Indicates institutions transferred from one class to another.

STATEMENT B

Showing the number of In-door and Out-door Patients treated in the State-public, Local fund and Private-aided Dispensaries of the Madras Presidency during the year 1919.

District.	Name of dispensary.	Of what class.	In-door patients.																	
			Total treated during the year.					Number cured.	Number relieved.	Discharged otherwise.	Died.	Ratio of deaths per cent to total treated.	Number of beds available.		Daily average number.

Government of Madras

LOCAL AND MUNICIPAL DEPARTMENT (PUBLIC HEALTH)

G.O. No. 106, 8th February 1921

Returns—Triennial, 1917—19—Civil Hospitals and Dispensaries—Madras Presidency, reviewed.

READ—the following paper :—

Letter—from the Hon'ble Major-General G. G. GIFFARD, C.S.I., K.H.S., I.M.S., Surgeon-General with the Government of Madras.
To—the Secretary to Government, Local and Municipal (Medical) Department.
Dated—Ootacamund, the 17th September 1920.
No.—63-T. 496.

Order—No. 106, Public Health, dated 8th February 1921.

Recorded.

2. The period 1917—19 was one of exceptional difficulty. The financial strain of the war and the depletion of the cadres of medical officers for war service were felt more acutely than in the preceding triennium. Public health in the year 1917 was fairly good, but 1918 was one of the sickliest years on record, and in 1919, though disease was less virulent, the general health was anything but satisfactory. In spite of these embarrassments, good progress has been made in the triennium under review, and the Surgeon-General's report gives prominence to important new departures in administrative policy.

3. *Institutions.*—The most noteworthy feature of the triennium is the assumption by the State of a larger share of the financial and administrative responsibility for medical relief. The headquarter hospitals of eighteen districts were brought under State management during the period under report, and also the Royapetta hospital in Madras City. The antiquated infirmary at Rayapuram has been replaced by a model institution of 210 beds.

4. The number of institutions maintained by local bodies has risen from 511 to 512, in spite of the transfer of 18 municipal hospitals, together with the Women and Children's Dispensaries at Mangalore, Coimbatore and Bellary, to Government control. No less than 40 new institutions were opened under local and municipal management, while 15 such institutions and 3 itinerating dispensaries were closed. Considering the shortage of medical officers occasioned by War, these figures are satisfactory, and credit is due to the retired officers and young students who came forward to fill the gaps, and to the self-denial of the permanent personnel in foregoing their leave.

5. The number of private institutions aided from public funds rose from 24 to 30. The number of other private institutions fell from 54 to 50. It is creditable to the private agencies concerned that, in spite of depleted funds and rising expenses, there has been a net increase under this head.

6. The problem of bringing medical relief within easy reach of the rural population remains unsolved. Itinerating dispensaries were not a success. The Government have alternative proposals now under consideration.

7. The Government regret to note a decline from 41 to 40 in the number of institutions devoted exclusively to the treatment of women. The reluctance of

Indian ladies to qualify themselves as medical practitioners is a menace to the expansion of these institutions for which there is a constantly growing demand.

8. Annexure I shows the extent to which medical relief is available in the several districts with reference to area and population. It will be observed that (leaving out of account Madras City) from the point of view of area by far the best served district is Tanjore, with one institution for every 84·7 square miles. Tinnevelly and the Nilgiris come next, Chingleput and Malabar follow. The worst served districts are the four Ceded districts and Vizagapatam. The last named contains more institutions (38) than any other district with the exception of Tanjore, and its position in the list is due to the inclusion of the Agency in the estimated area.

9. From the point of view of population the best served districts are the Nilgiris, Nellore, Tanjore and Kurnool, while last in the list come Kistna, Coimbatore, North and South Arcot and Trichinopoly.

10. *Staff.*—During the period under review the scales of pay of Indian Medical Service officers and sub-assistant surgeons were revised, and the amounts payable by the local bodies for the services of Provincial medical officers were standardized at the average pay of the class of officer employed irrespective of the pay drawn by the actual incumbents, a device which helps to stabilize the financing of local and municipal institutions. The arrangement by which graduates fresh from college are to be given a year's practical experience as house surgeons and house physicians before undertaking the full responsibilities of their profession could not be carried out fully owing to the exigencies of the War.

11. The insufficiency of the nursing staff is one of the worst defects in the medical administration of this province. The Government have the question under their serious consideration, but they doubt whether any substantial improvement can be effected unless the prejudice among Indian ladies against entering this honourable profession can first be overcome. It is impossible, under present conditions, to fill the nursing cadres of hospitals in Madras City, while in the mufassal a nursing staff hardly exists.

12. The Government regret the failure to induce indigenous midwives to adapt themselves to modern requirements. The whole question of maternity and infant welfare is under separate consideration, and it is hoped that local health and welfare associations will succeed in arousing the public conscience regarding the pernicious methods which at present prevail. It is impossible to effect any real improvement by official agency alone, and the Government note with pleasure the useful work undertaken by health visitors in Madras City and the prospect of co-operation from the Health and Welfare Association of Madras.

13. *Patients treated.*—Statistics of patients treated are, as pointed out by the Surgeon-General, inconclusive. Annexure II shows approximately the distribution of medical activity among the various agencies.

14. It will be noted that the percentage to the total number of out-patients treated of those treated in public State institutions rose from three in 1916 to eleven in 1919, while the percentage under local and municipal fell from 87 to 79. The attendance of patients in State hospitals rose by 685,357 (from 201,034 to 886,391) and that in local and municipal institutions fell by 721,203 (from 7,074,920 to 6,353,717). The percentage (6 per cent) treated in private institutions remained unchanged. There was a decrease of 29,461 in the total number of out-patients treated, a decrease attributed to the temporary closure of various institutions for want of staff.

15. The percentage of in-patients treated in State hospitals rose from 16 to 35; the percentage under local and municipal fell from 54 to 39. Private institutions bear a larger share in the treatment of in-patients than of out-patients; in 1919 they provided for one-fifth of the Presidency total.

16. Annexure III shows the number of persons per mille of the population treated in each district as out-patients or in-patients. Madras City apart, medical aid is most frequently sought in the Nilgiris, Tanjore, Kurnool and Nellore, and least frequently in Coimbatore, Cuddapah, Chittoor and South Arcot.

17. *Institutions for the exclusive treatment of women and children.*—The number of such institutions fell from 41 to 40. Owing to the paucity of qualified lady practitioners, the maintenance of these institutions is precarious. During the triennium no less than seven were closed and six new ones were opened. That the demand for the exclusive treatment of females is great is clear from the fact that in 1919 while 56·21 per cent of the beds reserved for women in general hospitals were occupied, in hospitals reserved for women and children, the percentage occupied was 78·21. It is significant that nearly half these institutions are under private management. The subjoined statement summarises the relief afforded to women in 1919 by the several classes of institutions:—

—	Number of exclusive hospitals.		Number of patients, 1919.			
			Exclusive institutions.		General hospitals.	
	1916.	1919.	Out-patients.	In-patients.	Out-patients.	In-patients.

18. *Diseases treated.*—The need for a closer study of the topographical distribution of disease and for intensive measures in areas most susceptible to infection has been discussed in the review on the report of the Sanitary Commissioner for 1919. The statements appended to this report supply useful information which the Surgeon-General would do well to utilize in framing a more specialized policy than has hitherto prevailed. Annexure IV shows very roughly the comparative incidence of selected diseases.

19. It is clear from the report that special action is needed to cope with certain diseases. The Government have under consideration the problems associated with leprosy, tuberculosis, hookworm and venereal diseases. Malaria, cholera and smallpox are preventable, and prevention is within the sphere of the Sanitary Commissioner's duties. It is hoped that in future medical relief and preventive medicine will be more closely co-ordinated than hitherto. The public apathy regarding tuberculosis must be counteracted by propaganda. The fact that, of the total number of patients treated for smallpox, 79 per cent had been vaccinated and 3 per cent re-vaccinated shows clearly that the general population is insufficiently protected by existing methods, and that re-vaccination must be more systematically enforced. The attempt to popularize the treatment of infectious diseases by locating wards within hospital compounds will be watched with interest.

20. The medical inspection of school children, in which a beginning has already been made, should provide useful data for elaborating a policy. The training of specialists has been initiated for dentistry and radiography; in ophthalmology this Presidency need not fear comparison with any country; but in other branches of specialized medicine a beginning has yet to be made, and it is difficult to foresee how substantial progress can be made until the province has a Research Institute of its own.

21. *Buildings.*—The Government regret to note that the growing expenditure on buildings is quite inadequate for the needs of medical administration. Estimates for the urgently needed buildings on the Spur Tank site have not yet reached finality. A long and costly programme is required to bring headquarter hospitals up to date, and the condition of local board and municipal institutions is worse. The provision of casualty wards in Local Fund dispensaries makes slow progress, the only Boards that have done their duty in this matter being those of North Arcot, Kurnool and Madura. Though it is of the utmost importance that medical

officers should reside within easy reach of the institutions for which they are responsible, there are still many stations in which no quarters are provided and the officers have to fend for themselves. Equipment, too, is in most institutions dangerously defective, and until it can be improved slovenly methods must continue. The Surgeon-General has been requested to draw up proposals for the improvement of headquarter hospitals and for standardizing the equipment of all classes of institutions. The financial resources at the disposal of the Government and local bodies do not permit of a sudden and universal regeneration, and the Government would impress on the Surgeon-General the need for grading his proposals in the order of their urgency and of so framing them that they may be embodied in an elastic and comprehensive programme that may be spread over a series of years.

22. *Finance.*—Owing to the increase in salaries and prices, the relief afforded to municipal funds by the transfer to the State of headquarter hospitals is not so great as might be expected, and the total municipal contribution for 1919 was Rs. 6·81 lakhs against Rs. 6·84 lakhs in 1917. The transfer has, however, affected substantially the proportionate distribution of the burden between the State and local bodies, as the following figures show :—

——	1917.	1918.	1919.	1881.	1891.	1901.	1911.
	In lakhs of rupees.	In lakhs of rupees.	In lakhs of rupees.	In lakhs of rupees.	In lakhs of rupees.	In lakhs of rupees.	In lakhs of rupees.

Percentage, Government	29	39	46	38	34	31	41
Do. Local	71	61	54	62	66	69	59

23. The Government have perused with interest the excellent record of operations performed by the surgeons named in paragraphs 47 to 49 of the report, particularly the phenomenal work in ophthalmic surgery. They congratulate the Surgeon-General on his inspection work. No less than fourteen headquarter hospitals were visited during 1919 in addition to two civil surgeoncies and twenty-six other institutions.

(By order of the Government, Ministry of Local Self-Government)

F. J. RICHARDS,
Secretary to Government.

To the Surgeon-General (Medical).
„ Surgeon-General (Sanitary).
„ Inspector of Local Boards and Municipal Councils.
„ Accountant-General.
